RE: Reclamation of Trouble Spots, Utah International Inc.,  
Cedar City Operations, ACT/021/001

On April 9, 1986, Sue Linner, Randy Harden, Dave Darby, Dave Cline, James Leatherwood, Rick Summers and Lynn Kunzler met with York Jones to view reclamation of Trouble Spots that were identified June 14, 1985. The seeding was performed during March 4-8, 1986, and included the Tailing Pond (4 acres), Low Grade Stockpiles #14, 15 and 18 (2.8 acres), Walker Iron Placer 3.5 acres and the Smith Stockpile #5 (2 acres). All these sites were visited and there was emergency of seeded species at all locations. The only potential problem noted during this visit was some rill & gully development along the North side of the Tailings Pond. The company will monitor this area and will repair the damage, should it be required, when they reseed the main yard. The Division was given a copy of the "As-built" reclamation plan which provided justification for altering seedbed preparation techniques and seeding methodology from that which was originally discussed (see November 8, 1985 letter).
